

## OM7697

GPS/GNSS low-noise amplifier evaluation board using BGU7007

### Demo board description

The BGU7007 GPS LNA evaluation board simplifies the evaluation of the BGU7007 LNA for the GPS application. The evaluation board enables testing of the device performance and requires no additional support circuitry. The board is fully assembled with the BGU7007, the input series inductor and a decoupling capacitor. The board is supplied with two SMA connectors for input and output connection to RF test equipment. The BGU7007 can operate from a 1.5 V to 2.85 V single supply and consumes about 4.7 mA.

### Features

- Two SMA connectors for input and output connection to RF test equipment
- Evaluation of the power on settling time  $t_{on}$  and the power off settling time  $t_{off}$

### Descriptive summary

#### Evaluation board content

BGU7007 LNA evaluation board in ESD safe packing

#### Applications

LNA for GPS, GLONASS and Galileo in smart phones, feature phones, tablet PCs, Personal Navigation Devices, Digital Still Cameras, Digital Video Cameras, RF Front End modules, complete GPS chipset modules and theft protection (laptop, ATM).
