

FEATURES

- 12°/hr bias stability
- Z-axis (yaw rate) response
- 0.01°/√sec angle random walk
- High vibration rejection over wide frequency
- Measurement range extendable to a maximum of ±450°/sec
- 10,000 g powered shock survivability
- Ratiometric to referenced supply
- 6 V single-supply operation
- Self-test on digital command
- Ultrasmall and light (<0.15 cc, <0.5 gram)
- Temperature sensor output
- Complete rate gyroscope on a single chip
- RoHS compliant

ENHANCED PRODUCT FEATURES

- Supports defense and aerospace applications
- Extended industrial temperature range (−55°C to +105°C)
- Controlled manufacturing baseline
- 1 assembly/test site
- 1 fabrication site
- Enhanced product change notification
- Qualification data available on request

APPLICATIONS

- Industrial applications
- Severe mechanical environments
- Platform stabilization

GENERAL DESCRIPTION

The [ADXRS646-EP](#) is a high performance angular rate sensor (gyroscope) that offers excellent vibration immunity. Bias stability is a widely recognized figure of merit for high performance gyroscopes, but in real-world applications, vibration sensitivity is often a more significant performance limitation and should be considered in gyroscope selection. The [ADXRS646-EP](#) offers superior vibration immunity and acceleration rejection as well as a low bias drift of 12°/hr (typical), enabling it to offer rate sensing in harsh environments where shock and vibration are present.

The [ADXRS646-EP](#) is manufactured using the Analog Devices, Inc., patented high volume BiMOS surface-micromachining process. An advanced, differential, quad sensor design provides the improved acceleration and vibration rejection. The output signal, RATEOUT, is a voltage proportional to angular rate about the axis normal to the top surface of the package. The measurement range is a minimum of ±250°/sec. The output is ratiometric with respect to a provided reference supply. Other external capacitors are required for operation.

A temperature output is provided for compensation techniques. Two digital self-test inputs electromechanically excite the sensor to test proper operation of both the sensor and the signal conditioning circuits.

The [ADXRS646-EP](#) is available in a 7 mm × 7 mm × 3 mm CBGA chip-scale package. Additional application and technical information can be found in the [ADXRS646-EP](#) data sheet.

¹ Parameter is linearly ratiometric with V_{RATIO} .

² Measurement range is the maximum range possible, including output swing range, initial offset, sensitivity, offset drift, and sensitivity drift at 5 V supplies.

³ From $+25^\circ\text{C}$ to -40°C or $+25^\circ\text{C}$ to $+105^\circ\text{C}$.

⁴ Adjusted by external capacitor, C_{OUT} . Reducing bandwidth below 0.01 Hz does not result in further noise improvement.

⁵ Self-test mismatch is described as $(ST2 + ST1)/((ST2 - ST1)/2)$.

⁶ Based on characterization.

ABSOLUTE MAXIMUM RATINGS

Table 2.

Parameter	Rating
Acceleration (Any Axis, 0.5 ms)	
Unpowered	10,000 <i>g</i>
Powered	10,000 <i>g</i>
V_{DD}, AV_{CC}	-0.3 V to +6.6 V
V_{RATIO}	AV_{CC}
ST1, ST2	AV_{CC}
Output Short-Circuit Duration (Any Pin to Common)	Indefinite
Operating Temperature Range	-65°C to +125°C
Storage Temperature Range	-65°C to +150°C

Stresses at or above those listed under the Absolute Maximum Ratings may cause permanent damage to the product. This is a stress rating only; functional operation of the product at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

Drops onto hard surfaces can cause shocks of greater than 10,000 *g* and can exceed the absolute maximum rating of the device. Care should be exercised in handling to avoid damage.

RATE SENSITIVE AXIS

This is a Z-axis rate-sensing device (also called a yaw rate-sensing device). It produces a positive going output voltage for clockwise rotation about the axis normal to the package top, that is, clockwise when looking down at the package lid.

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.
